PIG PRODUCTION

Features

- Automatically adjusts opening size based on internal static pressure, providing fresh and suitable air to pig houses.
- Blade panels open diagonally upwards from the bottom, directing airflow toward the ceiling area for better air mixing.
- Negative pressure adjustment design ensures energy-saving and reliable operation with low maintenance costs.
- Each layer of blades is made of transparent PC material, enhancing natural lighting conditions in pig houses.
- Adjustable counterweights allow customized blade opening resistance to meet specific needs.
- Compact installation space with simple design and easy installation.

Product Parameters

- Specification: Corresponding opening dimensions of a single inlet are 800mm long * 1120mm high and 1000mm long * 1120mm high;
- Material: Outer frame: PVC, plug: ABS, blade: PC transparent sun board, iron counterweight: hot dip galvanized, fixing parts: 304 stainless steel;
- Structure: four-layer fan blades, negative pressure adjustment.
